Abstract

Purpose

To investigate whether mesenchymal stem cells (MSCs) seeded in novel polyvinyl alcohol (PVA)-chitosan composite hydrogel can provide comparable or even further improve cartilage repair outcomes as compared to previously established alginate-transplanted models.

Methods

Medial femoral condyle defect was created in both knees of twenty-four mature New Zealand white rabbits, and the animals were divided into four groups containing six animals each. After 3 weeks, the right knees were transplanted with PVA-chitosan-MSC, PVA-chitosan scaffold alone, alginate-MSC construct or alginate alone. The left knee was kept as untreated control. Animals were killed at the end of 6 months after transplantation, and the cartilage repair was assessed

through Brittberg morphological score, histological grading by O'Driscoll score and quantitative glycosaminoglycan analysis.

Results

Morphological and histological analyses showed significant ($p < 0.05$) tissue repair when treated with PVA-chitosan-MSC or alginate MSC as compared to the scaffold only and untreated control. In addition, safranin O staining and the glycosaminoglycan (GAG) content were significantly higher ($p < 0.05$) in MSC treatment groups than in scaffold-only or untreated control group. No significant difference was observed between the PVA-chitosan-MSC- and alginate-MSC-treated groups.

Conclusion

PVA-chitosan hydrogel seeded with mesenchymal stem cells provides comparable treatment outcomes to that of previously established alginate-MSC construct implantation. This study supports the potential use of PVA-chitosan hydrogel seeded with MSCs for clinical use in cartilage repair such as traumatic injuries.

About this Article

Title

PVA-chitosan composite hydrogel versus alginate beads as a potential mesenchymal stem cell carrier for the treatment of focal cartilage defects

Journal

Knee Surgery, Sports Traumatology, Arthroscopy
Volume 23, Issue 5 , pp 1368-1377

Cover Date

2015-05

DOI

[10.1007/s00167-013-2723-5](https://doi.org/10.1007/s00167-013-2723-5)

Print ISSN

0942-2056

Online ISSN

1433-7347

Publisher

Springer Berlin Heidelberg
