Abstract Study of marine manglicolous fungi from East Malaysia (Borneo) was carried out during 23rd until 27th June 2009. Three islands in the Sulu Sulawesi Sea were selected for sampling: Jambongan Island, Mandidarah Island and Malawali Island. Mangrove driftwood, prop roots, pneumatophores, subterranean roots, rhizomes, overhanging branches and twigs of mangrove trees were examined for the presence of marine fungi. A total of 173
