Introduction

Answer Extraction and Selection

Keywords: Questions answering system, Programming (Theory), Programming Languages.

(Q/A) system in order to accommodate question related to programming problems. The answer is then served as the mechanism for retrieving the understanding of the Q/A system. This paper reports our approach to understanding query and declarative programming language. This is because almost all questions to programming problems are not only expressed in natural language that also included the grammar found in a particular programming language. The following two skills: the ability to understand the question and the ability to solve the programming problems. This is the process of learning, a learner needs to ask questions for knowledge acquisition.
